Address

El-Shrouk, Cairo - Egypt

PROFILE INFO

Highly skilled Software Engineer with expertise in Software Engineering, Database design & development, and Back-end Development. Possessing strong problem-solving abilities and a passion for creating innovative solutions, I am dedicated to delivering high-quality software products. Equipped with a solid foundation in front-end development and web design, I bring a holistic approach to my work, ensuring seamless integration between different components of software systems. With experience in web applications in addition to both desktop and mobile application development, I have a comprehensive understanding of the software development lifecycle.

WORK EXPERIENCE

Technical Support agent - WE

2019 - 2020

The Technical Support agent at WE Company assists customers with internet-related technical issues, troubleshooting and resolving problems with connectivity, software, and hardware. They possess strong technical knowledge, excel in communication and customer service, aiming for customer satisfaction and a positive experience.

Software Engineer - Freelance

2020 - present

As a Software Engineer freelancer, I launched and managed a startup providing web and mobile app development, digital marketing, and related solutions to companies. I delivered custom solutions, established successful partnerships, and contributed to client businesses' growth and success.

MASTERED TECHNOLOGIES

Software Engineering

I have a wide experience in software design and SDLC starting from requirement engineering to system design with UML diagrams and Agile methodologies.

Database design & Administration

I have designed and implemented a number of databases using different databases such as MySQL, postgres, Microsoft SQL, SQLite, Derby and MongoDB for different systems as E-Learning system, E-commerce System and other kind of systems.

Backend development

Highly skilled in backend development using Spring & Spring boot. Also, I have deep understanding of MVC, APIs, Microservices, Spring security, Thymeleaf, and other libraries and frameworks. Also, I have built a few projects using Node.js.

EDUCATION

2021 - present

Bachelor Of ICS - Software Engineering

BUE - The British University In Egypt.

PROJECTS (PORTFOLIO)

- **E-Learning System (Frontend)**

2021

The E-Learning System is a frontend project developed using HTML, CSS, and JavaScript. It includes over 28 pages and caters to two main user roles: students and professors. The project was built from scratch, starting with requirement analysis, wireframe creation, sitemap development, and implementation. The system offers students access to educational resources, progress tracking, discussion forums, and messaging features. Professors have tools for course management, content creation, grading, and communication. The user-friendly interface and responsive design enable seamless access across devices. The E-Learning System aims to enhance remote learning and collaboration by providing a comprehensive platform for education.
- **E-Learning System (Database)**

2022

The E-Learning MS Database project is a comprehensive system designed using ERD, E-ERD, and schema techniques, and implemented using SQL Server. It provides efficient management of educational data, including student information, course details, enrollment records, and grades. The project starts with designing ERD and E-ERD to capture the database structure accurately. The schema design phase defines tables, columns, keys, and indexes. The implementation involves creating the database and executing SQL statements for data manipulation. The E-Learning MS Database aims to optimize data organization and accessibility for a smooth e-learning experience.

Airline Reservation System

2023

The Complete Airline System Desktop App is a comprehensive software application designed from scratch using Java and JavaFX. It follows the SDLC methodology and includes UML class diagrams and other relevant diagrams. The app utilizes a file system-based database for data storage. It offers features such as flight management, seat reservations, passenger information handling, ticket generation, and reporting capabilities. The user-friendly interface and efficient design aim to streamline airline operations and enhance the passenger experience.

Law firm MS

2023

MS Law Firm is a comprehensive web application developed using Spring Boot, adhering to the SDLC approach. It offers staff members a powerful and efficient tool for managing law office tasks. With features such as cost estimation, appointment management, and report generation, this system proves to be an indispensable asset for law offices seeking to optimize their workflow, enhance efficiency, and improve overall performance.

Telda web application

2023

Telda is an online wallet system built from scratch using Spring Boot, Spring Security, and MVC. It provides a secure login function for clients to access their accounts, manage personal information, and control card status. Clients can request a card, check balance, recharge using a credit card, send money to other users, request money from friends, donate to charities, and even request a loan. The system sends notifications, handles help requests, and allows staff to manage client accounts, generate reports, and send offers. With a focus on security, privacy, and user experience, Telda offers a comprehensive set of features to ensure efficient financial management and seamless interaction between clients and staff.

Book store (CRUD)

2023

The CRUD Spring Boot web application is a practice project focused on building a book store system. It utilizes Spring Boot, Spring Security, Thymeleaf, MySQL, and MVC to create a secure and efficient application. With Spring Security, authentication and authorization are implemented to safeguard sensitive data. Thymeleaf handles server-side rendering, enhancing the user experience. MySQL serves as the backend database for seamless storage and retrieval of book-related information. The application enables users to perform essential CRUD operations, making it a practical and hands-on learning experience for developing a book store system.

Online Courses MS

2023

The online courses management system is a Spring Boot web application designed for practice. It includes two types of users (teachers and students) and utilizes Spring Boot, Spring Security, Thymeleaf, MySQL, and MVC. Teachers can create and manage courses, while students can enroll, access course materials, and participate in discussions. The application ensures secure authentication, dynamic web page rendering, and efficient data storage. It offers hands-on experience in developing an online courses management system using these technologies.
